

■ ■ ■ Aerosol Destruction and Recycling

MINIMIZE DISPOSAL COSTS AND ENVIRONMENTAL LIABILITIES

Aerosol containers present unique disposal and recycling opportunities. Finding the optimum disposal solution while maintaining control of costs can be challenging. Aerosol containers exhibit different characteristics, each lending themselves to different disposal solutions.

Strong uses technologies designed specifically for effective and economical aerosol container disposal, with an emphasis on recycling. For over ten years, our assignments have included high profile, high volume aerosol recalls

throughout North America. Industries such as personal care, household, automotive, food, industrial, paints and pesticides can benefit from the resources offered by Strong.

Strong offers best available technologies for processing high volumes of aerosol containers. Our facilities capture the aerosol propellants and utilize the material as an alternate energy source. All usable metal and plastic is captured, compacted, and sent for reclamation, which reduces landfill burdens. All DOT-compliant container types are accepted.

For our clients with brand protection concerns, our facilities render your aerosol containers unrecognizable. Additionally, we offer certificates of recycling for each load processed by our system, completing the chain of custody for your material.

Our aerosol container processing facilities utilize state of the art systems to ensure environmental safety and protection. While each facility possesses its own unique technologies, the final outcome is always the complete

reclamation of components, while eliminating release of fugitive emissions into the atmosphere.

Suitable materials for Strong's aerosol container program include:

- Aerosol Containers: flammables, corrosives, pesticides, and non-hazardous materials, of varied types and sizes
- Non-Aerosol Special Packaging: personal care products and paint containers, up to five-gallon bucket size

SUMMARY OF BENEFITS

- Reduction in total waste disposal and environmental liability
- Recycling versus outright incineration
- Thermal destruction of non-recyclables
- Cost-effective brand name protection

Strong strives to offer environmentally sound disposition solutions for all your waste stream management needs.

Who We Are

Since 1993, Strong Environmental has been providing treatment, recycling and disposal services for a broad spectrum of industrial, non-hazardous, hazardous and special waste materials. We offer our clients the industry's most comprehensive network of waste disposal and treatment providers and a management team of experienced professionals.
