

## ■ ■ ■ Fuels Blending/Recycle

### WHY FUELS BLEND/RECYCLE?

Fuels blending is an economical and effective method for disposal of hazardous and non-hazardous wastes in the form of liquids, sludges, or solids. The waste's energy value is utilized as a supplemental fuel in the cement manufacturing process. Specially permitted cement kilns or industrial furnaces utilize your waste as a fuel alternative to fossil fuels such as coal and oil. Advantages include:

- Limiting liability associated with alternative disposal options
- Conserving natural resources
- Disposal cost reduction

Your waste will be used as an alternative fuel source, or recycled into a new product.

### SUITABLE LIQUIDS

- Organic solvents
- Acrylic and polyester resins
- Petroleum oils and products
- Coolants and cutting fluids
- Off-spec chemicals
- Paints and inks
- Consumer products

### SUITABLE SLUDGES OR SOLIDS

- Paint waste (debris, filters, rags, booth sludges, strippings, still bottoms)
- Inks and contaminated debris
- Filter cakes and activated carbon
- Oily debris and absorbents
- Consumer products
- Flammable aerosols (puncture and reclaim process)

A wide range of organic, high- or low-BTU sludges and solids can also be used for energy recovery. These waste materials historically may have been incinerated, which is a costly method of disposal that falls short of utilizing their high energy potential.

### FUELS BLENDING BENEFITS

1. Safe and permanent treatment of waste while reclaiming its fuel (energy) value.
2. Recycling waste into fuel, thus reducing fossil fuel consumption.
3. Best available technology for non-reclaimable hazardous and non-hazardous waste.
4. Cradle-to-grave tracking of waste streams and certificates of recycling available.

Strong offers a wide range of fuels blending/recycle options, and offers the most cost effective, liability-limiting solutions for your high energy waste streams.

## Who We Are

Since 1993, Strong Environmental has been providing treatment, recycling and disposal services for a broad spectrum of industrial, non-hazardous, hazardous and special waste materials. We offer our clients the industry's most comprehensive network of waste disposal and treatment providers and a management team of experienced professionals.
