

## ■ ■ ■ Hazardous Waste Water

Generators of hazardous waste water streams require state-of-the-art technology in the treatment of their waste. Treatment methods vary with the type of hazardous waste water that is generated. Strong offers the best available treatment and disposal options for all types of hazardous waste water.

Some of the hazardous waste waters routinely managed by Strong include:

- Organics and water
- Lean waters
- Heavy metal waters
- Acidic/caustic waters
- Other industrial process waters

### WASTE ANALYSIS

Each stream must be carefully analyzed to determine the best technology available to properly dispose of or treat the waste in a cost-effective manner.

There are many questions that a generator of hazardous waste water must answer relative to current treatment technologies, and to assure compliance with local, state, or federal laws and EPA regulations:

- Are we utilizing the best available technology in the disposal of this waste?
- Are we minimizing long-term liabilities?
- Is the current method the most environmentally sound?
- Does the waste material have recycling potential, and how can that potential be maximized?
- Is the current treatment method the most cost-effective available for our waste?

These questions must be properly addressed by generators to ensure that they are operating in the most efficient manner possible. Strong has working

relationships with numerous hazardous waste water treatment facilities across the U.S. This enables us to offer flexibility in treatment at the most competitive rates.

### TREATMENT METHODS

The following is a list of treatment technologies to consider for each hazardous waste water stream:

- DAF Technology
- Distillation and evaporation
- Ultra-filtration
- Nano-filtration
- Reverse osmosis
- Chemical oxidation
- Recycle and reuse
- Solidification and biodegradation
- Incineration

We will work with you to determine the best technology to manage your waste. Being "facility neutral" allows Strong to recommend proper treatment technology for your streams.

Our aim is maximizing efficiencies and striving for overall best value for our customers.

## Who We Are

Since 1993, Strong Environmental has been providing treatment, recycling and disposal services for a broad spectrum of industrial, non-hazardous, hazardous and special waste materials. We offer our clients the industry's most comprehensive network of waste disposal and treatment providers and a management team of experienced professionals.
