

■ ■ ■ Non-Hazardous Incineration

Non-hazardous incineration of your waste materials offers many benefits. Incineration offers complete product destruction, minimization of Subtitle D landfill issues and liabilities, and participation in waste-to-energy technology that reduces dependence upon fossil fuel resources.

Strong has a broad network of non-hazardous waste-to-energy facilities in locations across the US. This state-of-the-art waste technology generates electricity for sell-back to local utilities, and/or steam for use by municipalities and government facilities. An additional benefit of this technology is recovery of

ferrous and non-ferrous metal wastes for recycling/reuse. Our non-hazardous incineration program is cost competitive, even when compared to non-hazardous landfill options.

Not all incinerators are alike, however the Strong network allows a wide range of wastes to be properly processed. Liquids, sludges, solids and powders can all be accepted in a variety of containment configurations, including poly/fiber drums, cubic yard boxes/bags and palletized finished products. Additionally, the direct feed incineration process is ideal for quick processing of materials requiring witnessed destruction.

WITNESSED DESTRUCTION

Strong is a registered DEA Reverse Distributor and an experienced provider of non-hazardous waste services. Strong manages disposal of all types of controlled substances, including mixed DEA/RCRA waste. For waste that requires witnessed destruction, Strong performs complete observation of the receipt, storage and incineration

process. We perform these services for both government and private sector clients.

BENEFITS AVAILABLE

- Direct feed of full pallets for high-security destruction.
- Witnessed required destruction services available with Certificates of Destruction provided.
- Plastic/fiber drums can be accepted
- Strong will assist with waste pre-approval.
- Low BTU materials are accepted.
- The heat energy from waste destruction is used to produce steam or electricity for local utilization.
- Facilities are perimeter secured with 24/7 security staffing.

Use of Strong's network of waste-to-energy facilities can reduce your disposal costs, improve environmental safety and conserve natural resources. Contact Strong for more information on developing a waste-to-energy incineration program for your waste streams.

Who We Are

Since 1993, Strong Environmental has been providing treatment, recycling and disposal services for a broad spectrum of industrial, non-hazardous, hazardous and special waste materials. We offer our clients the industry's most comprehensive network of waste disposal and treatment providers and a management team of experienced professionals.

Strong Environmental: The Single Source for Waste Management
