

## ■ ■ ■ Non-Hazardous Waste Water

Non-hazardous waste waters require proper evaluation and treatment in accordance with local, state, or federal laws. Generators of non-hazardous waste waters frequently encounter and address these questions:

- Is the current treatment method the most cost-effective available for our waste water?
- Are we utilizing the best available technology in the disposal?
- What is the most cost-effective transport option?
- Does the water have recycling potential, and how can that potential be maximized?
- Is the current method the most industrial environmentally acceptable option?
- Are our long term liabilities minimized?

Waste waters requiring pretreatment include:

- Waste metal working lubricants
- Ethylene/propylene glycol solutions
- Metal cleaning wash waters
- Adhesive rinse waters
- Industrial sludges
- Metal cutting coolants

- Batch tank rinse waters
- Oily waters and other industrial waste waters
- Waters with inorganic coagulators

Strong has working relationships with wastewater treatment facilities across the U.S., giving you the advantage of disposal cost control and flexibility in treatment. The following treatment options are available through Strong:

- Ultra-filtration
- Nano-filtration
- Micro-filtration
- Reverse osmosis
- Chemical separation
- Distillation and evaporation

- Recycle and reuse
- Solidification and biodegradation
- Incineration
- DAF technology

Additionally, newly developed separation technologies can recover marketable quantities of recyclable material from waste waters, which were in the past considered too costly to extract.

Strong will work with you to determine the best technology options available for processing your waste. In doing so, Strong always develops a secure disposal procedure, customized to your needs, maximizing efficiencies and striving for overall cost reduction.

## Who We Are

Since 1993, Strong Environmental has been providing treatment, recycling and disposal services for a broad spectrum of industrial, non-hazardous, hazardous and special waste materials. We offer our clients the industry's most comprehensive network of waste disposal and treatment providers and a management team of experienced professionals.
