

■ ■ ■ Recycling Metal-Bearing Wastes

WHY RECYCLE?

There are many advantages to recovering and recycling metal-bearing wastes. Other than disposal cost reduction (many times a net payment to you), you could limit liability and lower generator classification.

The possibilities for recycling are widespread and may be unrecognized by hazardous or non-hazardous waste generators. Strong can provide an understanding of the alternatives and also provide cost-effective choices.

RECYCLE WHAT?

Strong has recycle options for all major metals, including nickel, chrome, iron, zinc, copper and others.

In addition, Strong has successfully recycled many non-typical metal sources, such as foil candy wrappers, gum wrapper trimmings, pharmaceutical package trimmings, contact lens packaging and more.

MARKET KNOWLEDGE

Recycling your metal-bearing waste requires specific market and processing knowledge. Strong applies our knowledge base and established relationships to meet your needs.

Strong's extensive metals processor network provides an broad array of recycle/reuse/recovery/disposal options. We have experience providing specific solutions for a wide variety of metal-bearing waste streams.

Typically, our review process and pilot programs are at no cost to the generator. If there is a preferred recycle or disposal option available, Strong will provide it.

MATERIALS SUITABLE FOR RECYCLING

Manufacturing by-products, surplus, off-spec, and outdated materials including:

- Slags, mill scale, swarf, sludges, grindings, machinings, skimmings, refractors, bag house dusts, filter media, rinse waters, drying agents, circuit board etchants, overspray materials, filter cakes, chips, turnings
- Spent catalysts/solutions in liquid, slurry and solid forms
- Metal or aluminum trimmings
- Manufacturing scrap
- Other production wastes

These recovered wastes can be effectively transformed into valuable products for third party use.

Recycling metal-bearing wastes can lower overall costs compared with traditional disposal options, and may limit liability associated with "cradle to grave" waste ownership.

Who We Are

Since 1993, Strong Environmental has been providing treatment, recycling and disposal services for a broad spectrum of industrial, non-hazardous, hazardous and special waste materials. We offer our clients the industry's most comprehensive network of waste disposal and treatment providers and a management team of experienced professionals.
